Transmission Line Video & Photography

Pre Construction Video and Photography

Overhead and Underground Electric Transmission Lines

Call Us at **412-373-9100**

Company History

AllProUSA has been in business as All-Pro Video Production Inc for over 30 years. At our start we produced outstanding high end corporate/image videos for companies such as American Eagle and Tanger Outlets. Our services quickly became in demand as our reputation grew. The peak of our Corporate Video history came as we produced three documentary videos for the U.S. OPEN Golf Championships at Historic Oakmont Country Club.

The Present - Construction

Ten Years ago our business model changed with the focus of our business transitioning to Construction video and photography. During that period we have developed great relationships with contractors, developers, municipalities, counties, state departments of transportation and utility companies.

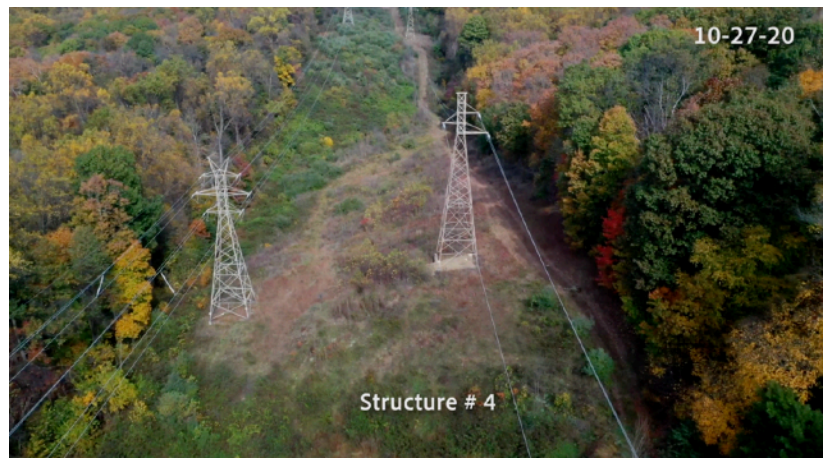

Our reputation grew quickly in this industry from the positive comments of Project Managers and Engineers that were more than happy to recommend us to their peers. Our repeat customers call on us anytime they need great video and photos for documenting a project or for marketing purposes. Our pre construction videos that document the pre construction conditions of job sites have saved our customers countless thousands of dollars and wasted time from frivolous litigation.

Above Ground Electric Transmission

For the past seven years the majority our work has been providing pre construction video and photography for overground and underground electrical transmission lines.

During that span we have worked for some of the largest construction and utility companies in the USA with above ground transmission lines in Indiana, Ohio, Pennsylvania, New Jersey, Maryland and Virginia.

The challenges of working in these varied environments of flat farm lands and mountainous terrains have resulted in a wide range of techniques to properly document the ROW (right of way) for our contractors and the utility companies.

Underground Electric Transmission

We have also provided exceptional, detailed documentation for city projects that often have underground electric transmission lines along with traditional above ground towers and poles traversing sidewalks and roadways as well as personal and business property.

We have documented large projects such as these in Washington DC, Tysons Corner Virginia, Lancaster PA, Wildwood NJ and Jersey City NJ.

F.A.A. Licensed Drone Pilots

Our Videographer and Photographers are experienced and skilled using only the best equipment for the job.

We have been approved for Drone Video projects this year by Pennsylvania Power & Light (PPL), Dominion Energy in Virginia and Atlantic City Electric (ACE)

Our Drone Pilots are FAA licensed and certified and have successfully completed the required FAA part 109 exam. All of our team members are full time employees of ALL PRO USA.

Quality Control

Quality at AllProUSA starts with mobilization. All team members are individually responsible for the overall quality of work by the team from the start. Checking all equipment prior to leaving for the job is first.

Once at the job site our team members will walk the site to find for the best locations for video and photos while keeping safety in mind. For any type of documentation we always take more video and photos that are required for the project. This will ensure we have what we need for our customer when we get to editing.

Service Area

Our service area includes the entire USA. To date our projects are centered on the Eastern, Midwest and Southern USA.

Projects outside of the USA are considered based on the scope of the project and time required to complete.

Safety

Safety on the job is our # 1 Priority. Every day on every project starts with a safety meeting that we take **very seriously**.

We discuss safety challenges we should expect and discuss how to avoid injury to our team and others we come in contact with as we perform our tasks. **PPE** (personal protection equipment) including high visibility clothing, helmets, safety glasses and steel toe boots are used as required for each project.

COVID-19 Safety

ALL PRO USA understands the importance of personal safety during the COVID-19 pandemic.

Using the best information from the CDC and other reliable sources we have developed a five point COVID Safety Plan. Go to the Covid-19 Safety page of our website, www.PreConVideo.com for full details.

Mission Statement

ALL PRO USA provides a non biased video and photographic appraisal of the pre-construction conditions of work sites and access areas that serve as a baseline in the determination of damage that may be caused by construction. Our team members conduct themselves in a professional manner and abide by the rule of “Safety First” at all times.

Website Samples

Take time to view our website and look at our dedicated Electric Transmission Line Page that includes many samples our our extensive work in this industry.
